How do COVID-19 vaccines work?

COVID-19 vaccines work by teaching your body's immune system how to recognize and fight off the virus. When you get vaccinated, your body produces antibodies that are specific to the virus. If you are then exposed to the virus, your immune system will be able to quickly recognize and destroy it, preventing you from getting sick.

What are the benefits of getting vaccinated?

There are many benefits to getting vaccinated against COVID-19, including:

- **Protection from severe illness and death:** COVID-19 vaccines are highly effective at preventing severe illness, hospitalization, and death from COVID-19. In clinical trials, the vaccines were shown to be 95% effective at preventing severe illness and 94% effective at preventing hospitalization.
- **Protection for others:** When you get vaccinated, you not only protect yourself from COVID-19, but you also help to protect your loved ones and your community. By creating a herd immunity, we can help to stop the spread of the virus and protect those who are most vulnerable.
- **Peace of mind:** Getting vaccinated against COVID-19 can give you peace of mind knowing that you are doing everything you can to protect yourself and your loved ones from this deadly virus.

What are the risks of getting vaccinated?

COVID-19 vaccines are very safe. The most common side effects are mild and temporary, such as pain at the injection site, fever, and fatigue. More serious side effects are rare. In very rare cases, people have developed a condition called myocarditis, which is an inflammation of the heart muscle. However, the risk of myocarditis from the vaccine is much lower than the risk of myocarditis from COVID-19 itself.

How can I get vaccinated?

COVID-19 vaccines are available at pharmacies, doctor's offices, and other healthcare providers. To find a vaccination site near you, visit the Vaccine Finder at [vaccines.gov](https://www.vaccines.gov).

Getting vaccinated against COVID-19 is one of the most important things you can do to protect yourself and your loved ones from this deadly virus. The vaccines are safe, effective, and free. Make an appointment to get your vaccine today.

To learn more about the COVID-19 vaccines, visit the Centers for Disease Control and Prevention (CDC) website at cdc.gov/coronavirus/2019-ncov/vaccines.
